

# ADD Savvy ProSite

Your web site will be hosted in a multimillion pound secure data-centre on the latest server technology.

## FEATURES

- i 150 MB Web space for your site and linked to your domain name.
- i 1 free UK Domain name registration included (ADDSavvy can register additional domain names if required)
- i Virtual Control Panel\* allowing real-time administration of your account  

The ADDSavvy web based control panel allows you to control every aspect of your ADDSavvy ProSite account. From the moment your account has been authorised you can use your control panel to manage your account, create databases, setup e-mail and more.
- i Unlimited POP3 e-mail accounts and auto responders.  

You can have as many e-mail addresses at your domain name as you wish.
- i Virus Scanning on your e-mail - You can setup automatic virus scanning of all e-mail sent to a domain name. The virus scanning operates on the border of our network and incoming messages are checked before they reach your inbox. The Virus Scanning technology is provided by McAfee Dr. Solomon's.
- i Unlimited e-mail forwarding - You can forward e-mail received at your domain name to another e-mail account.
- i Full CGI support  

You can use any CGI programs developed in any programming language.
- i Hosted on Windows 2000 servers with full support for Perl, ASP and ODBC database connectivity\*.
- i Your domains are hosted on the latest Intel Windows 2000 servers with full support for Perl, CGI, ASP, ISAPI, SHTML and IHTML scripting technologies.
- i You can create MSSQL Server databases on your account and have full control of them via the Microsoft Enterprise Manager or ODBC. MSSQL Server is the most powerful database available for the web today and is the solution used by many Corporate and Financial institutions worldwide.
- i Your web site can use any ODBC compliant database such as Microsoft Access or Microsoft Excel. ODBC data sources can be installed instantly on your control panel.
- i SSL Secure Server functionality
- i You can install SSL on your account which will allow secure transactions between with

your customers. SSL can be installed instantly from your control panel.

- i Live statistics for your website\* You can view real-time information about the visitors to your website.
- i Full support for Microsoft Frontpage 2000 Extensions\*
- i SQL Server 7.0 Database connectivity
- i Password Protection
- i You can password protect areas of your web site and authenticate users from a text file or any ODBC database. This can be achieved without any scripting and is controlled by the server giving high security and a professional image to visitors.
- i Bandwidth Monitoring
- i You can view current and historical reports online about the bandwidth usage of your web site.
